London, United Kingdom ◊ siddhantpagare2014@gmail.com ◊ [LinkedIn](#) ◊ [GitHub](#)

EDUCATION

King's College London

2025

Master of Science in Economics and Policy - Distinction

Specialisation: Labour Economics, Public Policy, Causal Inference

Thesis: Ranked 2nd overall among 75 students for best dissertation

University of London (London School of Economics Distance Programme)

2023

Bachelor of Science in Economics - Upper Second Class

Specialisation: International Economics, Mathematical Economics, Industrial Economics

- Top 1 Globally (100/100 grade): Mathematics I; Top 5 percent of cohort: Mathematical Economics
- Sustainability Advocate Award awarded twice by University of London (Gold Award; Bronze Award)

RESEARCH EXPERIENCE

Research Assistant, Department of Political Economy & Centre for Sustainable Business

2026

King's College London | Supervisor: Dr Raphael Cunha

- Construct a news-text-based Environmental Regime Uncertainty (ERU) index of firm exposure to extraterritorial environmental regulation (EU Deforestation Regulation; Brazil, Indonesia), following Baker, Bloom and Davis.
- Build firm by sector panel datasets in R and support difference-in-differences and event-study analysis linking regulatory uncertainty to exports, filings, and market reactions.

WORKING PAPERS

Does Telework Widen the Abstract-Task Wage Premium?

2025

Master Thesis, 82 percent | SSRN: 6312638

- Estimate the causal wage premium for remote-feasible work in the US using CPS-ORG microdata (2019 to 2023), classifying occupations by telework feasibility with O*NET task data (Dingel and Neiman 2020)
- Implement two-way fixed effects DiD, finding a premium of about 2.5 percent concentrated among telework-feasible workers, robust to Honest DiD bounds (Rambachan and Roth 2023), event-study and placebo tests

Reform by Stealth: A Three-Month Assessment of India's Labour Codes

2026

Sole authored | Revised and Resubmitted, Economic and Political Weekly

- Argue that India's four labour codes, consolidating 29 central laws, recalibrate the balance between state, capital and labour, using ASI and PLFS microdata and a comparison of central and state rules
- Show that raising the retrenchment approval threshold from 100 to 300 workers leaves roughly 90 percent of industrial units outside routine government scrutiny (ASI 2023-24)

SKILLS

Tools	R, Stata, Python, Qualtrics, AI coding tools (Claude Code, ChatGPT), GitHub, L ^A T _E X
Skills	Large-scale data cleaning and processing; dataset merging and crosswalk construction; reproducible pipelines; data visualisation; PLFS, ASI, CPS, ACS, ATUS, O*NET, BLS data handling
Languages	English (Native), Hindi (Native), Marathi (Native), Japanese (B1), Mandarin Chinese (A2)
